Where it's at in Atlantic City Page 51
What to see at SJCC Page 61

Exhibitors at this year's SJCC will be greeted by the new West Hall — no more going up and down stairs — at the Convention Center. The phone company has promised to repeat last year's good performance, but call (609) 646-9900 (NJ Bell) and ask for Al Girsh if there's any trouble. For any other problems call the very cooperative Convention Bureau (609) 345-7536. Ask for Wayne Stetson.

Atlantic City

Getting there is half the fun

Air service to SJCC is via Allegheny out of Philadelphia. Air Taxi service is also available from New York, Philadelphia, Baltimore and Washington via Southern Jersey Airways. Call (609) 345-2239. Limousine service is available out of the Philadelphia airport. Call (215) 726-9955 or (215) 729-0550. Return reservations are a must. Call (609) 344-3171. Best bet from New York is the bus from Port Authority Terminal. Call (212) LO 5-7040 or (212) PE 6-1640. Rail service is also available. Call (609) 344-6531.

Product keys help select equipment

To help you track down equipment at SJCC, we've indicated the type of products each of the exhibitors will be showing

Mainframes

Minicomputers

Disk drives and controllers

Magnetic-tape drives and controllers

Other peripherals, including keypunch equipment, card and paper-tape readers/punches, memories and remote-batch terminals.

Terminals, including crt's and teleprinters.

Source-data input devices, including key-tape and key-disk equipment, ocr's, badge and magnetic-ink readers.

Plotters/digitizers

Printers

COM equipment

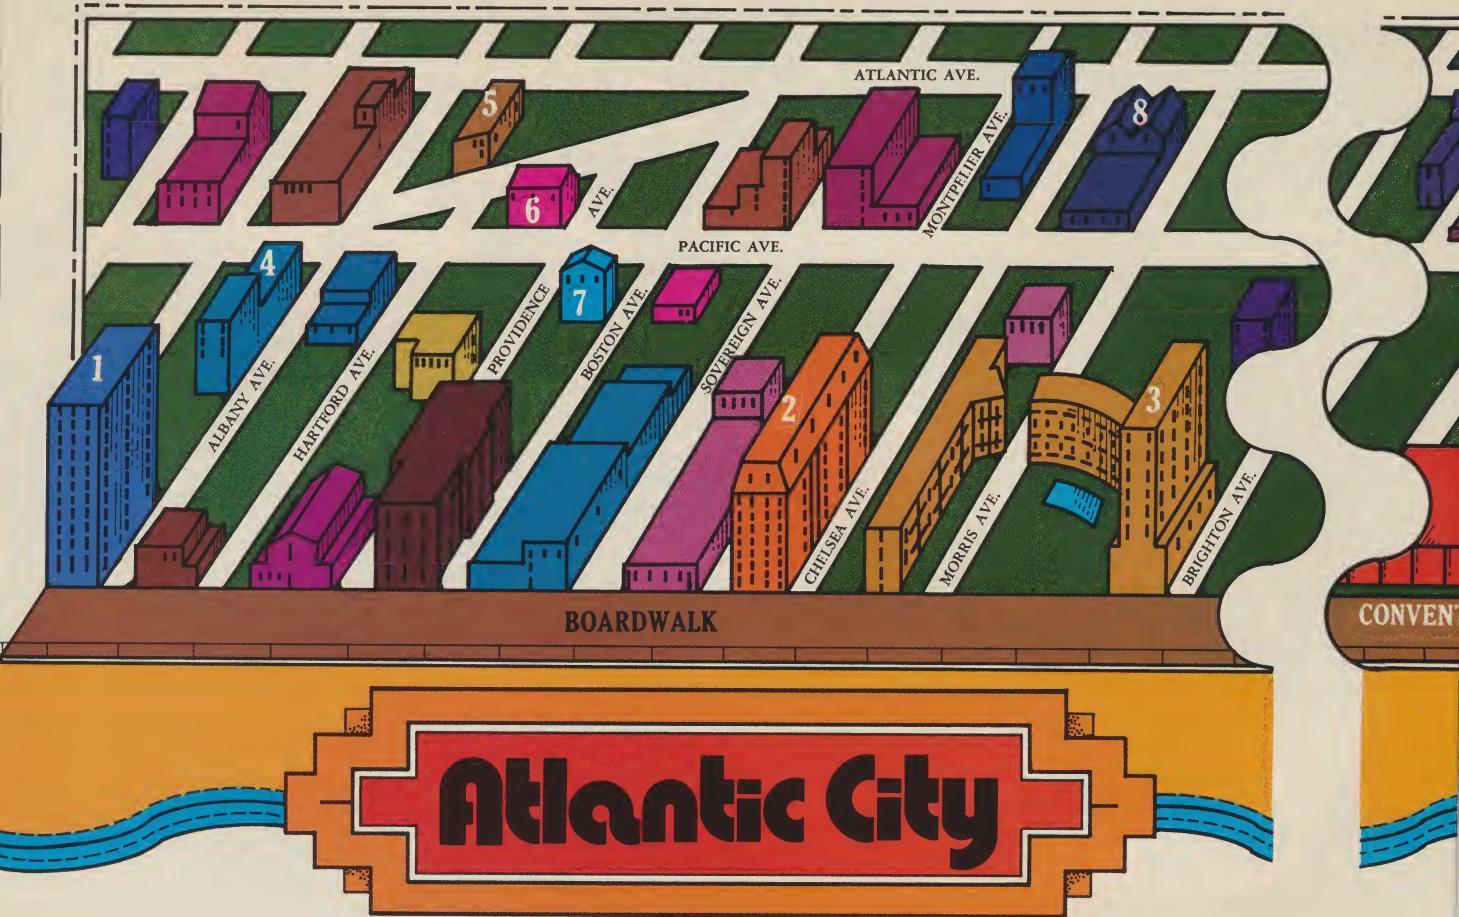

Data transmission devices, including multiplexers, modems and acoustic couplers.

Software

Services

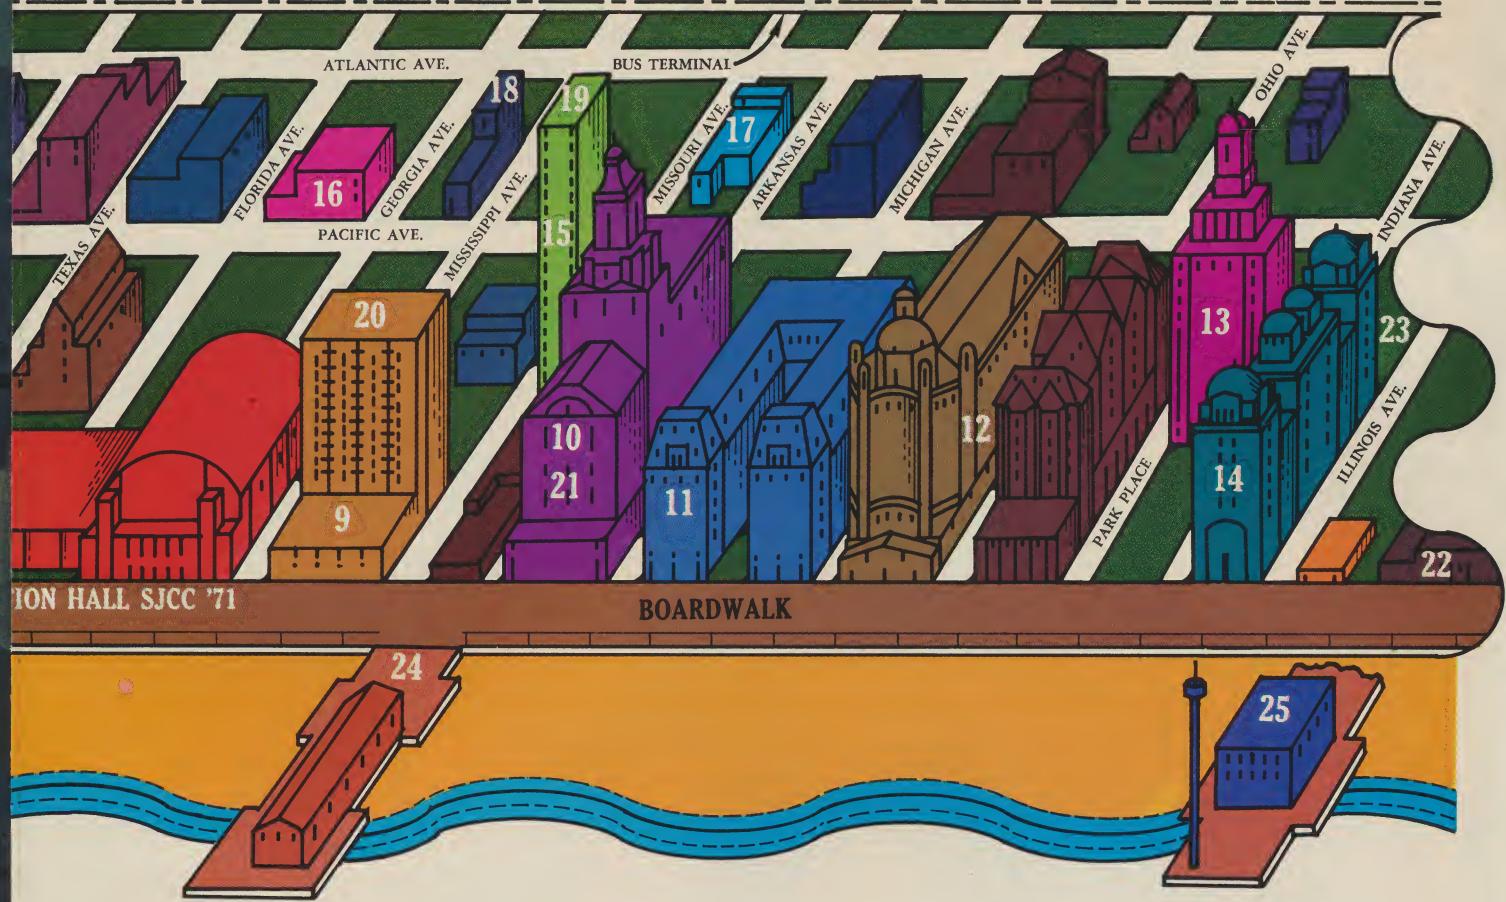

Accessories, including edp supplies, off-line equipment and components.

Publications, including magazines, newspapers, books and research.

COMPARISON-SHOP CRT TERMINALS!

**It's the only way to be sure you're
getting the most for your money.**

CRT Terminal Shopping List

Specifications	Hazeltine 2000	Any Other
Teletype Terminal Compatible	Yes.	
Screen Capacity	1,998 characters. 74 per line. 27 lines.	
Selectable Transmission Rates	5 switchable rates, up to 9600 bps.	
Full- or Half-Duplex Operation	Yes. Switch-selectable.	
Batch Operation	Yes. Switch-selectable.	
Direct Cursor Addressability	May be program-directed to any screen position by transmitting X-Y coordinates.	
Split Screen	Yes. Computer-derived data is lower-intensity (background); operator-entered data is brighter (foreground).	
Editing Capability	Yes. Line and character insert/delete. CPU can clear entire screen or foreground data only.	
Variable Field Transmission	Foreground data only is transmitted to CPU.	
Automatic Tabulation	Yes. TAB key directs cursor to next entry point.	
Selective Scrolling	Yes. At any line when under program control; automatically at line 1, unless otherwise directed.	
Remote Keyboard Operation	Yes. Quiet, solid-state keyboard may be operated remotely.	
10-Key Cluster for Numerical Input	Yes.	
Random Access Memory	Yes. 2048 X 8 Core.	
Status Lights	Yes. 5 are provided to indicate system operational status.	
Circuit Protection	Yes. Integral overvoltage and short circuit current-limiting with automatic shutdown.	
Hard Copy Accessory	Yes. Silent 30 cps Printer — optional.	
Remote Monitors	Yes. 3 remote monitors may be connected without amplifiers. With amplifiers, the number is unlimited.	
Availability	Immediate!	

**And only
\$88 a month**

(12-month rental, plus \$20 maintenance)

Ask for a demonstration!

(Then insist on Immediate Delivery!)

DATA TO OR REQUEST DATA FROM A COMPUTER, EITHER DIRECTLY OR OVER TELEPHONE LINES TO A CENTRAL COMPUTER, IT IS A DIRECT EQUIVALENT FOR TELETYPEWRITER EQUIPMENT AND IS FASTER, ABSOLUTELY RELIABLE IN OPERATION, TOO. THE OPERATOR NEEDS ONLY TO KEY IN THE MATERIAL DISPLAYED ON A 1990 CHARACTER BY 812 LINE CRT SCREEN. OTHER FEATURES INCLUDE: LINE AND CHARACTER IMAGE MEMORY, PLAY-THROUGH FEATURES SUCH AS LINE AND CHARACTER IMAGE WHICH HAS BEEN HIRED AND A HIGH SPEED RANDOM ACCESS MEMORY. THE HAZELTINE 2000 HAS BEEN HIGHLY ACCEPTED AND IS BEING USED BY AN INCREASING NUMBER OF BUSINESSES, GOVERNMENTAGENCIES, INSTITUTIONS AND HOSPITALS. SOME OF THESE FEATURES ARE: HIGHLY ENGINEERED AND OPERATING FEATURES FOLLOW: A 1990 CHARACTER DISPLAY, A TRUE STAND ALONE UNIT, A LIGHTWEIGHT KEYBOARD, SWITCH-SELECTABLE FULL COLOR OR BLACK AND WHITE OPERATION, SELECTABLE TRANSMITTERS AND RECEIVERS, TWO-LEVEL VIDEO INTENSITY PARTICULARLY USEFUL FOR DISPLAYING COMPUTER DERIVED COPY IN LOWER INTENSITY, FOR EXAMPLE, TO ENHANCE DATA IT IS BRIGHTER. HAZELTINE CORPORATION INVITES YOU TO COME AND SEE THE HAZELTINE 2000.

HAZELTINE CORPORATION IS ONE OF THE LEADING MANUFACTURERS OF COMPUTERIZED ELECTRONIC EQUIPMENT.

**Hazeltine
2000**

We're not promising... We're Delivering!

Delivering Performance—the best Video Display Terminal on the market. Delivering Price—only \$88 per month (12-month rental) plus \$20 maintenance. Delivering now! Ask for a demonstration. Then insist on Immediate Delivery! You won't be disappointed.

Hazeltine Printer Unit

Description

The Hazeltine Printer Unit provides users of the Hazeltine 2000 Video Display Terminal with a choice of silent hard-copy printing options.

Coupled with the Hazeltine 2000, the Printer Unit may be operated in two distinct modes—Conversational or Page (regardless of whether the terminal is on-line to a computer or communication system).

The mode of operation may be switch-selected by the operator or selected by the CPU under program control.

Conversational Mode

All data exchanged between the terminal and computer is printed.

The Printer Unit automatically assumes the baud rate of the terminal-computer system at either 10, 15 or 30 characters per second.

Page Mode

In this mode, the Printer Unit ignores the data exchange of the terminal-computer system until directed to print on command from either the operator or the CPU. Using the powerful buffering capabilities of the Hazeltine 2000 to their fullest extent, printing occurs directly from the terminal's 2000-character core memory. This permits the flexibility to fill the screen with a page of information, edit the information at the terminal, and then cause the

page to be printed at 30 cps, regardless of the baud rate set for the terminal-computer network. Thus, the Hazeltine Printer Unit allows the software or the operator to produce hard-copy only when meaningful data is on the screen, eliminating wasted output while optimizing operator efficiency.

Solid-state construction with a minimum of moving parts insures performance that is quiet, efficient and reliable.

Specifications

Input/Output Data Rate	Up to 30 characters per second
Interface	Operates in conjunction with the Hazeltine 2000 Video Display Terminal
Controls	On-Line Line Feed Carriage Return Power On/Off
Paper Size	8½-inches wide, 300 foot roll
Paper Type	Thermal
Unit Size	15½" Wide x 16" Deep x 6" High
Weight	30 lbs.
Power	Self-Contained Supply, Single Phase, 240 VAC ±10%, 50 Hz 120 VAC ±10%, 60 Hz

**Printer Unit 12-Month
Rental: \$78 per month
(Maintenance Included)**

Hazeltine 2000+ Terminal/Tape Cassette System

Description

The Hazeltine 2000+ Terminal/Tape Cassette System is a powerful blend of high-speed, fully-buffered CRT Terminal and high-speed magnetic tape storage device. The system utilizes all the editing capabilities of the Hazeltine Terminal and expands them to even greater user benefits through the interaction of a "dual" magnetic Tape Cassette Unit. The Tape Unit is equipped with a variety of features under both operator and CPU control. The result is an exceptional capability for on/off line data storage and retrieval.

The system operates on RS-232B connections using Data-Phone* 103A/202C or equivalents, or may be hardwired to modem adapters of communications controllers and mini-computers.

The system operates in two basic modes:

- Paper Tape Emulation Mode
- Page Mode

Paper Tape Emulation Mode

Using the system as a paper tape reader/punch, data is recorded character-by-character as it is generated by either keyboard entry or from the CPU at speeds up to 1,200 baud with no timing considerations (padding characters not necessary after each line of data).

Data recorded on tape may be subsequently played back at the baud rate selected on the CRT Terminal and transmitted to the computer.

Page Mode

In this mode, the system can be used to record pages (screens) of data entered by the operator on the display. Utilizing the full editing capabilities afforded by the core memory buffer of the Terminal, the data may be completely edited by the operator before recording on tape. In this mode, the screen becomes a scratch-pad and therefore only pure data is recorded. Each page may be from 1 to 1997 characters and may be retrieved by the operator for review or transmission to the computer. In the Page mode the data transfer between Terminal and Tape Unit is fixed at 2400 baud.

Additionally, either cassette may be selected for recording or playback by the CPU under program control. The CPU can record data displayed on the screen, or retrieve data on tape by calling for a transmission from either cassette through the CRT Terminal.

Typical Application—Form Fillout

Operating off-line, form fillout is an excellent application for the Hazeltine 2000+ Terminal/Tape Cassette System. The form can be stored on one tape as "protected" data

*Registered Service Mark of AT&T Co.

Hazeltine 2000+ Terminal/Tape Cassette System

and displayed on the Terminal screen. Entries to the form are edited and stored on the second tape, ready for transmission to the computer at a later time.

Tape Update

Updating a tape is simple. The operator merely reads a record from one tape, edits it, and then writes it on the second tape. If a duplicate tape is desired, simply depress the "Duplicate" key.

Optional "Hard Copy" Unit

For those applications requiring hard copy printouts, the Hazeltine Printer Unit is the ideal peripheral.

Specifically designed to take full advantage of the editing features of the Terminal/Tape Cassette System, the 30 cps Printer Unit also operates in either continuous or Page mode, thereby rounding out the system with complete compatibility of operation on any application.

CPU to Tape Cassette Commands

The CPU may command the following functions of the Tape Cassette Unit:

FUNCTION	COMMAND
• Playback Tape 1	@
• Playback Tape 2	P
• Record Tape 1	Zero
• Record Tape 2	p
• Rewind Tape 1	←↔
• Rewind Tape 2	0
• Write End of File	SPACE
• X on:	

All of the above functions may also be performed by the operator at the Tape Cassette console, as well as the "Duplicate" function.

Specifications

Input/Output Data Rate	Fixed at 2400 baud between Terminal and Tape Cassette—Transmits to the line at any baud rate selected by the Terminal
Tape Cassette	Phillips type
Storage Density	400 b.p.i.
Controls	Playback 1 Playback 2 Record 1 Record 2 Rewind 1 Rewind 2 Duplicate Reset On-Line Page/Character Block/Continuous
Size	15½" Wide x 16" Deep x 6" High
Weight	25 lbs.
Power	90-136 VAC, 50-60 Hz. 180-272 VAC, 50-60 Hz.
